**The security that you are
searching for your garage
door is ready**

The **BOXALARM**® kit: a “do-it-yourself” pack for your garage door’s security

With the BoxAlarm kit, you can quickly and effectively protect doors, windows and manual or motorized garage doors, both of a new and old generation.

The BoxAlarm kit combines effectiveness and practicality: it is a simple instrument that might be installed without the intervention of a trained staff and it guarantees all the security you need for your garage.

With **BOXALARM**® you safeguard your garage in a simple and effective way.

A complete kit, quick and easy to install

The **Alarm control panel** of the Kit BoxAlarm is a compact system with integrated siren, which is ideal for installing on doors and windows. It can manage 4 input lines and 4 radio sensors, besides the integrated sensor that protects from possible tampering.

The system is expandable up to 2 sirens.

Compatible with BallanNET.

The **radio sensor** can be easily installed on garage doors, pass doors, windows, etc. The sensor detects and manages three distinct disorders: detachment (by magnet), vibration and inclination. These disorders have an adjustable sensitivity and can be inhibited by connecting the dedicated input.

The **magnet** is the sensor radio's accessory that allows to detect a detachment as for example for the pass door.

The **Smart BoxAlarm** is a remote control that easily handles the alarm control panel

- Button 1 Activate the alarm control panel
- Button 2 Deactivate the alarm control panel
- Button 3 Displays the alarm control panel status

Status:

- Green Deactivated
- Red Activated
